

General: using cloud engines for analysis

From time to time I need some extra analytical power that my laptops cannot provide. When that happens, I often use Chessify cloud engines (<https://chessify.me>). The neat feature is that these integrate with Chessbase so you can use them in analysis just like a normal engine.

Cloud Service

Analyze more for less with your favorite chess engines empowered by our superfast cloud servers.

PURCHASE NOW	PURCHASE NOW	PURCHASE NOW

As you can see, the speeds of Stockfish available from this cloud service (500000Kn/s!) far exceed anything a laptop can achieve! (my laptop can get to about 18000Kn/s in a normal middlegame position).

1. The first step is to sign up and purchase a plan.

Register for FREE and verify your accounts to receive up to 2500 coins as a bonus

[SIGN UP](#)

2. After that, the next step is to download the Chessbase plugin.

ChessBase plugin

Chessify Cloud Service is available for use in other GUI programs, like Chessbase desktop application.

[DOWNLOAD CHESSBASE PLUGIN](#)

3. After download, run the installer.

	ChessifyCloudEngineInstaller.msi	19/05/2021 20:44	Windows Installer ...	58,800 KB
---	----------------------------------	------------------	-----------------------	-----------

4. The installer puts several Chessify files on your hard drive

> This PC > OS (C:) > Program Files (x86) > Chessify > Cloud Engine 2.0

5. You can add these to your Chessbase as normal UCI engines (see the specific instructions on this in another document)

6. You are then able to select these as analysis engines from Chessbase:

Load engine			
Engine		Author	
UCI Chessify Cloud LCZero		Chessify, Inc.	
UCI Chessify Cloud Stockfish		Chessify, Inc.	
UCI Dragon by Komodo Chess 2 64-bit		Don Dailey, Larry Kaufman	
UCI Lc0 v0.27.0		The LCZero Authors.	
UCI Stockfish 190521		the Stockfish developers (s	
UCI Stockfish 200521		the Stockfish developers (s	
UCI Stoofvlees II a18		Gian-Carlo Pascutto	

7. After selecting one, you will be asked to log in with your account

Black is slightly better

10. At some stage, your server is ready and you your analysis session can begin.

11. Make a new move on the board to activate it

You know Leela has started here as the speed is much slower than Stockfish (just 80Kn/s)

12. From the moment Leela starts you are using your purchased credit so analyse wisely and don't forget to click on **Stop Server** on the Chessify screen at the end (don't just close your engine in Chessbase!!)
